Abstract: Currently computers are changing from single isolated devices
 into **entry points** into a worldwide network of **information exchange**
 and business **transactions**. Support in **data information**, and
 knowledge exchange is becoming the key issue in current computer
 technology. Ontologies will play a major role in supporting **information**

 development of a joint **standard** for specifying and exchanging ontologies.
 We are precisely concerned with this necessity. We present CL, which is a
 proposal for such a **standard**. It is based on existing proposals such as
 OKBC, XCL and RDF schema, enriching them..
